IDENTIFIERS *California

ABSTRACT

The primary objective of this study was to identify concentrations and locations of American Indian, Asian American, Black, and Spanish Surname students attending the public schools of California. A comparative analysis of the four ethnic minority groups being studied is also presented. The study first identifies four major ethnic minority groups in the United States and indicates their respective percentages of the total United States population. Second, the same ethnic minority groups are identified for California and compared to national percentages. Third, the study identifies the student ethnic minority population in California. Results are presented in tabular form with narrative analysis. (JD)

ACKNOWLEDGMENTS

The authors gratefully acknowledge the assistance of Armando Arias, a graduate student at the University of California, San Diego, for his research skills in the data analysis.

Our thanks are also expressed to Craig Handly for the art work inherent in the color-coded maps.

We wish to thank Curt Douglas and Elaine Heffernan for their careful review and editorial remarks concerning the report.

Special thanks to Tony Pickslay who was responsible for programming the computer to allow the data to be presented in a number of ways.

Finally, the authors wish to acknowledge the California State Department of Educatiaon for providing a copy of the computer tape with the data which made this study possible.

This report was made possible by a grant from the National Urban Coalition in Washington D.C. which funds the California School Finance Reform Project in San Diego and by funding from the Institute for Cultural Pluralism at San Diego State University within the School of Education. The opinions expressed in this publication do not necessarily reflect the position, policy, or endorsement of the funding agencies.

A Joint Publication of:

The California School Finance Reform Project in San Diego

and

The Institute for Cultural Pluralism

Introductory Statement

The California School Finance Reform Project in San Diego has defined as its primary purpose the conduct of non-partisan research and related public education activities concerning the funding of public elementary and secondary education in the state of California. The California School Finance Reform Project in San Diego is especially concerned with Mexican American/Chicano students' educational needs.

The Institute for Cultural Pluralism, under the direction of Dr. M. Reyes Mazon, functions in a research and development capacity--in the area of teacher training for the linguistically and culturally distinct child--within the School of Education at San Diego State University. It is committed to the concept of a culturally pluralistic society and as such its efforts are dedicated to creating an atmosphere of understanding and acceptance of cultural diversity in our educational system and in the larger society.

INTRODUCTION

Oftentimes agencies, projects, or individuals expend considerable energy, expense, and time to gather data of particular interest to an investigation. The data, once collected, are used to satisfy stated research objectives, test hypotheses, or answer particular questions. The data are then usually stored and for the most part forgotten. Complete utilization of data is hardly ever fully realized for a number of reasons, one being that once the purpose for collecting the data is satisfied, there is no reason to engage in secondary data anlysis.

This study attempts to show that data collected by one agency can also be used by other agencies to engage in meaningful research studies. Data collected by the California State Department of Education was used in this study to identify concentrations of ethnic minority students in the public schools of California.

This study, published as the first in a continuing series of research reports, provides the reader with data relative to concentrations of ethnic minority students by county and by school district. School board members, administrators, program directors, researchers, evaluators, community people, students and others will hopefully find the report of use.

Objectives of the Study

The primary objective of this study is to identify concentrations and locations of American Indian, Asian American, Black, and Spanish Surname students attending the public schools of California. A comparative analysis of the four ethnic minority groups being studied also is presented.

The study first identifies four major ethnic minority groups in the United States and indicates their respective percentages of the total United States population. Second, the same ethnic minority groups are identified for California and compared to the national percentages. Third, the study identifies the student ethnic minority population in California.

The student ethnic minority population data for California has been presented in three ways. First, actual numbers of students in each group are given for each county. Second, the number of students in each county belonging to each ethnic minority group is presented as a Percentage of the State Total of students for that ethnic minority group. Finally, the number of students in each county belonging to each ethnic minority group is presented as a Percentage of the County Total of all students in that county. Hence, "10% of the state total of American Indian pupils" indicates that the American Indian students in that county constitute 10% of all American Indian students in the state; "10% of county total" indicates that those American Indian students constitute 10% of all students in that county.

Limitations of the Study

One limitation of the study is the problem inherent in the classification of persons into ethnic minority groups. Each of the sources used in the collection of data used categories pertinent to its own needs. For example, the United States Census identifies "white" as a major category which has as one sub-category "Persons of Spanish Heritage". The California Racial/Ethnic Survey, however, identifies "Spanish Surnamed Americans" as a major category and not as a sub-category of any other group. The following chart indicates the categories used from the various sources to arrive at categories for the present study.

Ethnic Minorities Identified in This Study	1970 Census (United States)	1970 Census (California)	California Racial/Ethnic Survey
American Indian	Indian	Indian	American Indian
Asian American	Western Asian, Chinese, Japanese, Other Asian	Japanese Chinese Korean	Chinese, Japanese, Other Asian
Black	Negro	Negro	Black
Spanish Surname	Persons of Spanish Heritage	Persons of Spanish Language, and other persons of Spanish Surname	Spanish Surnamed American (includes: persons of Mexican, Puerto Rican, Central American, Cuban, Latin-American or other Spanish origin)
All Other	White* and other ethnic	White** and other ethnic	All others

A second limitation of the study is the currency of data. Student ethnic minority data by county or district are not available for school years after 1973-74.

A third limitation is that students were categorized as belonging to one of the four major ethnic groups (American Indian, Asian American, Black, and Spanish Surname) according to 1) self-identification, 2) identification by the school, or 3) identification by the community. There is a possibility that any two of the three criterion measures might be in disagreement.

Finally, limitations inherent in the collection of data by the various agencies also were inherited by this study. For example, the United States Bureau of the Census has estimated that there was a 7.7% undercount of the Black population in the 1970 census. The bureau estimates the undercount of the "Spanish Speaking background" population to be 1.9%, though the United States Commission on Civil Rights argues there is evidence that the undercount is at least as high as that for the Blacks (U.S. Commission on Civil Rights, 1974).

* Includes "Persons of Spanish Heritage". For purposes of this study, "Persons of Spanish Heritage" have been treated as a separate group (Spanish Surname) and not as a part of "All other" or "white and other ethnic."

**Includes "Persons of Spanish language, and other persons of Spanish Surname." For purpose of this study, "Persons of Spanish language and other persons of Spanish Surname" have been treated as a separate group (Spanish Surname) and not as part of "All other" or "White and other ethnic".

Definitions of Terms

ADA -
"Average Daily Attendance" or the aggregate days attended by all students divided by the number of days school is in session.

Range of Percentages
An interval of percent values, such as:

a) 0.0 - 1.0	f) 22.1 - 32.0
b) 1.1 - 2.0	g) 32.1 - 42.0
c) 2.1 - 7.0	h) 42.1 - 52.0
d) 7.1 - 12.0	i) 52.1 - 62.0
e) 12.1 - 22.0	j) 62.1 and over

A county in California having Asian Americans representing 2.9% of the county total of all students would be placed in the 2.1 - 7.0 range of percentages.

Percentage of the state total -
The number of students of any given ethnic minority group in a locality divided by the total number of students in California belonging to that same ethnic minority group.

Percentage of the county total -
The number of students of any given ethnic minority group in a county divided by the total number of students in the county.

Percentage of the district total -
The number of students of any given ethnic minority group in a district divided by the total number of students in the District.

Ethnic minority group -
American Indian, Asian American, Black or Spanish Surname groups.

A Cautionary Note on Myths and Misinterpretations

Many research studies suggest that different ethnic groups can be lumped together and viewed as a single, homogeneous minority group, usually identified as "deprived," "disadvantaged," or "culturally different". Our findings are that both similarities and major differences exist in geographic distributions of the four ethnic groups. For example, Spanish Surname and Black students both tend to be concentrated in urban school districts such as Los Angeles, San Diego, and San Francisco. However, according to the results of this study, the major difference between Black and Spanish Surname students in terms of geographic location lies in the fact that Spanish Surname students are heavily concentrated in urban as well as rural school districts throughout the State of California, whereas the Black students tend to be heavily concentrated only in the urban areas.

Therefore, each of the four major ethnic groups being studied will first be discussed and analyzed separately; a later section in this report will compare the four ethnic minority groups.

Data Base

The data utilized to determine the number and percent of ethnic population in the United States and California were collected by and cited from the 1970 census conducted by the U.S. Bureau of the census. The student ethnic minority data in the state of California were extracted from the Racial/Ethnic Survey conducted in the Fall of 1973 by the State Department of Education in Sacramento, California. The instrument utilized in the Racial/Ethnic Survey is presented as Appendix A.

ANALYSIS OF THE DATA

This section of the report presents the data and discusses the findings of the study. The presentation and analysis of the data is divided into seven parts. The first part presents and compares the number and percent of the major ethnic populations in the United States and in the State of California. The number and percentages of ethnic minority students attending the California public schools during 1973-74 are also presented in the first part.

Parts two through five present and discuss the number and percent of student ethnic minority concentrations by county and district for American Indian, Asian American, Black, and Spanish Surnamed students.

The sixth part compares the relative geographic location and concentration among the four student ethnic minority groups. Part seven of the report presents and discusses intra-district student ethnic minority composition and concentrations in selected school districts.

Table 1 presents the number and percent of ethnic minority group populations in the United States based on the 1970 census data. The Blacks are the largest ethnic minority group in the U.S. with 11.1 percent, followed by Spanish Surname with 4.57 percent, and all others with 83.42 percent. The total ethnic minority population constitutes 16.58 percent of the total U.S. population.

Table 1

NUMBER AND PERCENT OF ETHNIC MINORITY POPULATIONS IN THE UNITED STATES BASED ON THE 1970 CENSUS

	American Indian	Asian American	Black	Spanish Surname	All Others	Total
No.	760,572	1,090,712	22,539,362	9,294,509	169,524,373	203,210,158
%	.37	0.54	11.1	4.57	83.42	100

Table 2 presents the number and percent of ethnic minority populations in California based on the 1970 census data. The largest ethnic minority in California is the Spanish Surname with 15.54 percent, followed by the Blacks with 7 percent, Asian American with 2 percent, and American Indian with 0.4 percent. The four groups constitute about 25 percent of the total California population.

Table 2

NUMBER AND PERCENT OF ETHNIC MINORITY POPULATIONS IN CALIFORNIA BASED ON THE 1970 CENSUS

	American Indian	Asian American	Black	Spanish Surname	All Others	Total
No.	88,271	399,179	1,397,138	3,101,589	14,971,127	19,957,304
%	0.44	2.0	7.0	15.54	75.02	100

Table 3 compares the percent of ethnic populations in the United States to the percent of ethnic population in California based on the 1970 census data. Of the ethnic minority groups presented in Table 3, the Blacks are the only ethnic group that have a lower percentage (decrease) when compared to the national average. The Spanish Surname ethnic minority population has the highest percentage increase (10.97 percent) when compared to the national average. The total ethnic minority population represents an 8.4 percent increase in California when compared to the United States. Similarly, all others in California decrease 8.4 percent when compared to the national average. The Spanish Surname and Black ethnic populations are the two ethnic minorities with the largest representation in California.

Table 3

COMPARISON BETWEEN PERCENT OF ETHNIC MINORITY POPULATIONS IN CALIFRONIA AND THE UNITED STATES BASED ON THE 1970 CENSUS DATA

	American Indian	Asian American	Black	Spanish Surname	All Others	Total
CA.	0.44	2.0	7.0	15.54	75.02	100
U.S.	0.37	0.54	11.1	4.57	83.42	100
Difference:	+0.07	+1.46	-4.1	+10.97	-8.40	

Table 4 presents the number and percent of ethnic minority students attending the public schools in California during 1973-74. The Spanish Surname students represent the largest ethnic minority group in the public schools with 17.2 percent, followed by Blacks with 9.8 percent, Asian American with 3.0 percent, and American Indians with 0.5 percent. The total student ethnic minority population is 30.5 percent.

Table 4

NUMBER AND PERCENT OF ETHNIC MINORITY STUDENTS ATTENDING PUBLIC SCHOOLS IN CALIFORNIA DURING 1973-74

	American Indian	Asian American	Black	Spanish Surname	All Others	Total
No.	22,327	133,717	433,793	765,863	3,092,369	4,448,069
%	0.5	3.0	9.8	17.2	69.5	100

The four maps which follow show those counties with concentrations of American Indian, Asian American, Black, and Spanish Surname students in California. The legend is standardized for each map. Each color or shade represents the percentage of the county total for that particular ethnic minority group. The lighter colors represent the lowest percent of ethnic minority persons in those counties. A progression from light to dark colors indicates a progression from low to high concentrations of ethnic minority pupils.

The ranges of percentages contain different intervals because there exists a large number of counties with less than ten percent of the county total of American Indian or Asian American students. Therefore, the first three ranges were created as such in order to adequately discriminate differences in the lower ranges. There were no counties with more than 62 percent of any student ethnic minority group.

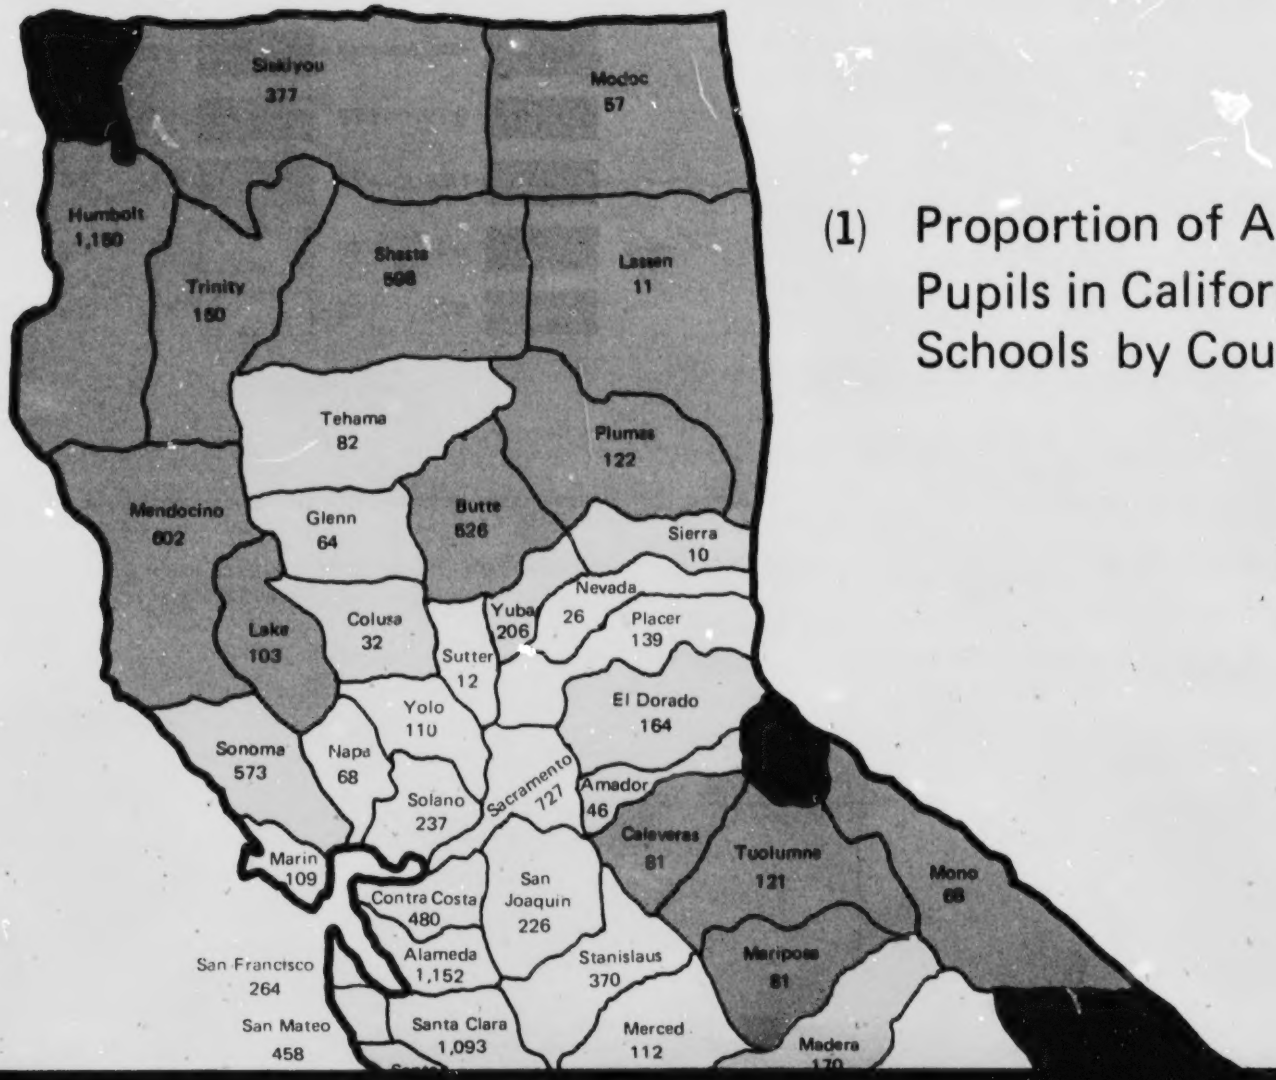
In presenting the concentrations of the four student ethnic minority groups, both color coded maps and summary tables are utilized. The maps present data based on the percentage of county totals.

The average daily attendance (ADA) for each ethnic group is also included for each county and is to be used as an estimate since the actual number varies each year. The ADA figure in each county proves to be useful as an alternative way of identifying the location and concentration of the four major student ethnic minority groups being studied.

In some cases, there was a high percentage of the county total for a particular ethnic group, but actually there was a small number of students in that group. In other cases, there were counties with a large number of students of a given ethnic minority group, but they constituted a very small percent of the total student population for that county.

In order to provide data on the percentage of the state totals for ethnic minority students summary tables were develoepd for each major ethnic group being studied. The tables ranked the counties from high to low based on the number of ethnic minority students in each county (percentage of state total). The color coded maps and the corresponding summary tables allow the reader to identify the various concentrations of ethnic minority students in terms of actual numbers, percentage of state total and percentage of county total.

Lists of those school districts with five percent or more of the district total in each ethnic minority group being studied are presented in Appendix B. The five percent figure was chosen as a cut-off point because the Office of Civil Rights used that figure in its historic May 25, 1970 Memorandum. The four major ethnic minority groups being studied are presented and discussed in alphabetical order.



(1) Proportion of American Indian Pupils in California Public Schools by County.

Racial/Ethnic Survey Data for Public Schools in California collected in Fall 1973 by State Department of Education.

Numbers in each county are to be used only as estimates.

Legend

Percent Pupil Densities

AMERICAN INDIAN STUDENTS

Map 1 presents the percentage of American Indian pupils in the California public schools by county during 1973-74. Map 1 shows that there were 31 counties with less than 1 percent American Indian students; 10 counties with 1.1 to 2.0 percent; and 14 counties with 2.1 to 7.0 percent. Three counties had more than 7.0 percent American Indian students: Inyo, 9.7 percent; Del Norte, 12.4 percent; and Alpine 37.1 percent.

Table 5 ranks counties by percentage of all American Indian students attending California public schools during the 1973-74 school year. According to Table 5, Los Angeles County has the largest number of American Indian students with 3,746 students.

Five counties have more than 1,000 American Indian students representing a 39.2 cumulative percent of the state total. In terms of numbers (ADA), 49.6 percent of all American Indian students in California are concentrated in eight counties. During the 1973-74 school year, there were 22,327 American Indian students in California elementary and secondary schools.

Table 6 shows the number and percentage of county total of American Indian students attending the California public schools during 1973-74. Map 1 is based on the findings presented in Table 6. Table 5 differs from Table 6 in that the percent column in the former table represents the number of American Indian students in each county as a percent of the total number of American Indian students for the entire state. In Table 6, the percent column represents the number of American Indian students for each county as a percent of the total number of students for that county. Specifically, according to Table 5, Los Angeles County has 3,746 American Indian students representing 16.8 percent of the total American Indian students in California. Table 6 shows that the same 3,746 American Indian students in Los Angeles County only represent three tenths of a percent (0.3%) of the total students in that county.

A county-by-county comparison between Table 5 and Table 6 shows that results differ, depending upon the standard of measurement chosen. For example, Alpine County has the highest percentage of county total (37.1%) of American Indian students with 39 students. However, Table 5 shows that Alpine County's American Indian students are only one-tenth of one percent (0.1%) of all the American Indian students in California.

Table 6 shows that American Indian students were not heavily concentrated in any one county relative to other students. But in terms of actual numbers, American Indian students appear to be concentrated mostly in Los Angeles County.

The ranking of California school districts with five percent or more American Indian students attending the public schools during the 1973-74 school year is presented in Appendix B, Table A. There are 95 school districts with 5 percent or more American Indian students in those districts. Reservation Elementary School District in Sonoma County tops the list with 100 percent American Indian students followed by San Pasqual Valley Unified and Junction Elementary School District with 48.6 and 45.8 percent respectively.

Based on the percentage of the county total, school districts with high concentrations of American Indian students appear to be grouped in the northern part of the state as indicated by Map 1 and Table A. However, Table 5 suggests that in terms of actual numbers (ADA), American Indian students are concentrated in the southern part of the state in Los Angeles and San Diego Counties; in the central part of the state in Alameda and Santa Clara Counties; and in the northern part of the state in Humboldt County.

Thus, if one uses percentage of county total as the standard of measurement, the data reveal that American Indian students are concentrated in the northern part of the state. If, however, one uses actual numbers in terms of average daily attendance, the data show that American Indian pupils are concentrated in a different part of the state.

Table 5

RANKING OF CALIFORNIA COUNTIES BY TOTAL NUMBER OF AMERICAN INDIAN STUDENTS ATTENDING THE PUBLIC SCHOOLS DURING THE 1973-74 SCHOOL YEAR

County	Number*	% of State Total	Cumulative % of State Total	County	Number*	% of State Total	Cumulative % of State Total
Los Angeles	3,746	16.8	16.8	Madera	170	0.8	89.7
Humboldt	1,550	6.9	23.7	El Dorado	164	0.7	90.4
San Diego	1,198	5.4	29.1	Trinity	150	0.7	90.1
Alameda	1,152	5.2	34.3	Placer	139	0.6	91.7

ASIAN AMERICAN STUDENTS

Map 2 shows the percentages of county totals of Asian American pupils in the California public schools during 1973-74. It also shows that there were 28 counties with less than 1 percent Asian American students, 15 counties with 1.1 to 2.0 percent, and 14 counties with 2.1 to 7.0 percent. The only county with more than 7 percent Asian American students was San Francisco County with 25.3 percent.

Table 7 shows the ranking of counties by percentage of state total for Asian American students attending California public schools during the 1973-74 school year. According to Table 7, Los Angeles County had the largest number of Asian American students with 45,696 followed by San Francisco County with 19,734 students.

Approximately half of the Asian American students in California were in Los Angeles and San Francisco Counties. Eight counties had more than 5,000 Asian American students per county, representing 18.4 percent of the total Asian American students in California. During the 1973-74 school year, there were 133,716 Asian American students in California elementary and secondary public schools.

Table 8 presents the number and percentages of county totals for Asian American students during 1973-74. Map 2 is based on the findings presented in Table 8. As stated above, San Francisco was the only county with a sizeable percent (25.3) of Asian American students. Table 8 further indicates that Asian American students were not heavily concentrated in any one county relative to other students. In terms of total numbers, however, Asian American students were concentrated most heavily in Los Angeles and San Francisco Counties.

Table 7 differs from Table 8 in that the percent column in the former represents the number of Asian American students in each county as a percent of the total number of Asian American students in California. The percent column in Table 8 represents the number of Asian American students for each county a percent of the total number of students for that county.

The ranking of California school districts with five percent or more Asian American students (percentage of district total) attending public schools during the 1973-74 school year is presented in Appendix B, Table B. There were 66 school districts with 5 percent or more Asian American students. Pope Valley Union Elementary School District in Napa County heads the list with 89.6 percent Asian American students. Bayshore Elementary and San Francisco Unified had 33.8 and 25.2 percent respectively.

School districts with high percentages of county totals for Asian American students are grouped in the San Francisco Bay Area, as indicated by Table 8. Map 2 shows that the Asian American student population is concentrated along the coast from the San Francisco Bay Area southward.

Table 7 suggests that in terms of actual numbers (ADA), Asian American students are concentrated in the urban San Francisco and Los Angeles areas.

Both standards of measurement, i.e., percentages and absolute numbers, are in agreement in identifying concentrations of Asian American students.

Table 7

RANKING OF CALIFORNIA COUNTIES BY TOTAL NUMBER OF ASIAN AMERICAN STUDENTS ATTENDING THE PUBLIC SCHOOLS DURING THE 1973-74 SCHOOL YEAR

BLACK STUDENTS

Map 3 shows the percentage of county totals for Black pupils in the California public schools during 1973-74. Map 3 shows that there were 23 counties with less than 1 percent Black students, 10 counties with 1.1 to 2.0 percent, 17 counties with 2.1 to 7.0 percent, and 4 counties with 7.1 to 12.0 percent. Solano, Alameda, and Los Angeles County had 12.1 to 22.0 percent Black students. San Francisco County had the highest percentage of Black students with 30.5 percent.

Table 9 shows the ranking of counties by percentage of state total for Black students attending California public schools during the 1973-74 school year. According to Table 9, Los Angeles County had the largest number of Black students with 230,084 students.

Thirteen counties had more than 5,000 Black students each, representing 93.6 percent of all Black students in California. Los Angeles County alone had 53.0 percent of the total Black students in the state. During the 1973-74 school year, there were 444,793 Black students in California elementary and secondary public schools.

Table 10 shows the number and percentages of county totals for Black students during 1973-74. Map 3 is based on the findings presented in Table 10. As stated above, San Francisco is the only county with a sizeable percent (30.5%) of Black students. Table 10 further indicates that Black students were not heavily concentrated in any one county relative to other students. In terms of actual numbers, however, Black students are concentrated mostly in Los Angeles, Alameda, and San Francisco Counties.

Table 9 differs from Table 10 in that the percent column in the former represents the number of Black students in each county as a percent of the total number of Black students in California. The percent column in Table 10 represents the number of Black students for a given county as a percent of the total number of students for the same county.

The ranking of California school districts with five percent or more Black students (percentage of district total) attending the public school year is presented in Appendix B, Table C. There are 136 school districts with 5 percent or more Black students. Compton Unified School District in Los Angeles County tops the list with 88.2 percent Black students followed by Ravenswood City Elementary and Fresno Colony Elementary School Districts with 84.4 and 74.8 percent respectively.

School districts with high percentages of county totals for Black students are located in the urban areas of Los Angeles and the San Francisco Bay Area as indicated by Table 10. Map 3 shows that the Black student population is concentrated in the San Francisco Bay Area and in Los Angeles. Map 3 further indicates that Black students are located in the southern part of the state but comprise only a small percent (less than 7.0 percent) of the county populations. Table 9 agrees with Table 10 and Map 3 in that the Black student population is concentrated in the urban areas of Los Angeles County and in and around the San Francisco Bay Area Counties.

Table 9

RANKING OF CALIFORNIA COUNTIES BY TOTAL NUMBER OF BLACK STUDENTS ATTENDING THE PUBLIC SCHOOLS DURING THE 1973-74 SCHOOL YEAR

County	Number*	% of State Total	Cumulative % of State Total	County	Number*	% of State Total	Cumulative % of State Total

SPANISH SURNAME STUDENTS

Map 4 shows the percentages of county totals for Spanish Surname pupils in California public schools during 1973-74. Map 4 shows that Spanish Surname students were located throughout the state. Specifically, there was only one county, Alpine, with less than 1 percent Spanish Surname students; 4 counties had 1.1 to 2.0 percent; 19 counties had 2.1 to 7.0 percent; 12 counties had 7.1 to 12.0 percent; 13 counties had 12.1 to 22.0 percent; and 6 counties had 22.1 to 32.0 percent. Madera had 32.3 percent; San Benito ahd 53.6 percent; and Imperial had 57.5 percent Spanish Surname students.

Table 11 ranks counties by the percentage of state total for Spanish Surname students attending California public schools during the 1973-74 school year. According to Table 11, Los Angeles County had the largest number of Spanish Surname students with 312,055 students.

Twenty-two counties had more than 5,000 Spanish Surname students each, representing 95.3 of all Spanish Surname students in California. Los Angeles County alone had 40.8 percent of the total Spanish Surname students in the state. During the 1973-74 school year, there were 765,863 Spanish Surname students in California elementary and secondary public schools.

Table 12 shows the percentages of county totals for Spanish Surname students during 1973-74. Map 4 is based on the findings presented in Table 12. As stated above, Madera, San Benito and Imperial Counties, Spanish Surname students were not heavily concentrated in any one county relative to other students. Spanish Surname students, unlike the other three ethnic groups discussed earlier, were located in substantial numbers throughout the state. In terms of actual numbers, most Spanish Surname students are concentrated in Los Angeles County.

Table 11 differs from Table 12 in that the percent column in the former represents the number of Spanish Surname students in each county as a percent of the total number of Spanish Surname students in California. The percent column in Table 12 represents the number of Spanish Surname students for a given county as a percent of the total number of students for the same county.

The ranking of California school districts with five percent or more Spanish Surname students (percentage of district total) attending the public schools during the 1973-74 school year is presented in Appendix B, Table D. There are 64 school districts with 5 percent or more Spanish Surname students. Parlier Unified School District in Fresno County tops the list with 92.6 percent Spanish Surname students followed by Heber Elementary and Calexico Unified School Districts in Imperial County with 92.5 and 91.8 percent respectively.

School districts with high percentages of county totals for Spanish Surname students are located chiefly in central and southern California (Table 12). Map 4 indicates that the Spanish Surname student population was concentrated in Imperial County in the southern part of the state, and in San Benito and Madera Counties in the central part of the state. Furthermore, Map 4 suggests that Spanish students are located in sizeable percentages throughout the State of California.

Table 11 shows that in terms of actual numbers, Spanish Surname students were primarily concentrated in Los Angeles, Santa Clara, Orange, and San Diego Counties, illustrating a high Spanish Surname pupil concentration in the southern coastal counties.

Both standards of measurement, percentages and actual numbers, are in agreement in identifying Spanish Surname students as being primarily concentrated in the central and southern parts of California, in both urban and rural areas.

Table 11

RANKING OF CALIFORNIA COUNTIES BY TOTAL NUMBER OF SPANISH SURNAME STUDENTS ATTENDING THE PUBLIC SCHOOLS DURING THE 1973-74 SCHOOL YEAR

County	Number*	% of State Total	Cumulative % of State Total	County	Number*	% of State Total	Cumulative % of State Total

STUDENT ETHNIC MINORITY GROUP COMPARISONS

Thus far, each of the four ethnic minority groups being studied--American Indian, Asian American, Black, and Spanish Surname students--have been presented and discussed separately. This section of the report attempts to compare and discuss the the similarities and differences among the ethnic groups relative to their geographic locations and concentrations.

As an overview, Table 4 presents the numbers and percentages of ethnic students attending the public schools in California during 1973-74. Maps 1, 2, 3, and 4 illustrate the concentrations of the four ethnic minority populations in each of the 58 counties in California.

According to Map 1, American Indian Students appear more predominant in terms of a percent of the total county student population in the northern east/central, and southern part of the state. Asian American students appear more predominant in terms of a percent of the total county student population in the San Francisco Bay Area and southward along the coast (Map 2).

Map 3 suggests that Black students appear more predominant in terms of a percent of the total county student population in counties in and surrounding San Francisco, Los Angeles, and San Diego. These three geographic areas have 90 percent of the total Black pupil population in California.

Finally, Spanish Surname students (Map 4) appear more predominant in terms of a percent of the total county student population in Imperial and San Benito counties. When comparing Map 4 with Maps 1, 2, and 3, it becomes obvious that Spanish Surname students are located in sizeable percentages throughout most of the 58 counties in California.

In terms of actual numbers, as determined by the average daily attendance, the four student ethnic minority groups show a slightly different pattern of concentration. For example, all four student ethnic minority groups have the largest number of students in Los Angeles County. Specifically, there are 3,746 American Indian students in the Los Angeles County which represent 16.8 percent of the state total. Of the total 133,717 Asian American students in California, 45,696 or 34.2 percent are in Los Angeles County. Forty-nine percent of the total Asian American students in the state are in Los Angeles and San Francisco Counties.

There are 230,084 Black students in Los Angeles County which represent 53.0 percent of the state total. Finally, of the total number of Spanish Surname students in California, 312,055 or 40.8 percent are in Los Angeles County.

Therefore, when one is engaged in an educational research study and one of the variables is student ethnicity, a decision must be made whether to use absolute numbers of students or percentages of total number of students as a standard of measurement. The researcher should determine which standard will satisfy the objectives of the study; once a standard of measurement has been chosen it should not be changed.

There were 1,040 public school districts in the State of California during the 1973-74 school year. Table 13, shows the number of California school districts with ranges of percentages for American Indian, Asian American, Black, and Spanish Surname students attending the public schools during 1973-74. The data presented in Table 13 were for all 1,040 school districts, i.e., unified, high school, and elementary combined.

The purpose of Table 13 is to show the number and percent of school districts with a given percent of ethnic minority students. For example, there were 7 school districts with 20 - 29.9 percent American Indian students. Similarly, there was only one district where Asian American students represented 20 - 29.9 percent of the

district total of students. There were 14 school districts where Black students represented 20 - 29.9 percent of the total district student population. There were also 90 districts where Spanish Surname students represented 20 - 29.9 percent of the total district student population. The same analysis is possible for any ethnic minority group.

Table 13 indicates that the number of school districts with Spanish Surname students were more spread out over all the range of percentages than any of the other three ethnic groups. This indicates that there were more school districts with higher numbers of Spanish Surname students. For example, there were 21 school districts which had between 60 and 69.9 percent Spanish Surname students compared to 2 school districts with the same percentage of students.

Table 14 is similar in format to Table 13. However, Table 14 presents the number of California school districts with ranges of percentages and corresponding numbers of American Indian, Asian American, Black and Spanish Surname students attending California public schools during 1973-74.

The 428 school districts which had 0.1 - 0.9 percent American Indian students account for the largest number (9,951) of American Indian students in any one range of percentages.

The 367 school districts which had 1.0 - 4.9 percent Asian American students account for the largest number (75,776) of Asian American students in any one range of percentages.

The 14 school districts which had 20 - 29.9 percent Black students account for the largest number (171,348) of Black students in any one range of percentages. It is interesting to note that the 2 school districts with 80 - 89.9 percent Black students contain a total of 33,950 students.

The 90 school districts which had 20 - 29.9 percent Spanish Surname students account for the largest number (278,048) of Spanish Surname students in any one range of percentages. Approximately 58 percent of all Spanish Surname students in the California public school districts were in school districts with 10 - 29.9 percent Spanish Surname students.

SELECTED INTRA-DISTRICT ANALYSIS

Four school districts were selected to present intra-district analysis of the student ethnic composition and the number of schools with various ranges of percentages of total ethnic minority students. The four districts are Fresno Unified, San Francisco Unified, San Diego Unified, and Los Angeles Unified.

Table 15 presents the number and percentage of district total of ethnic minority students attending the Fresno Unified Public School District during the 1972-73 school year. In this school district, the Spanish Surname students represented the largest ethnic minority group with 11,268 students or 20.5 percent. Approximately one-third of the students belonged to one of the four ethnic groups.

Table 15

NUMBER AND PERCENT OF ETHNIC MINORITY STUDENTS ATTENDING THE FRESNO UNIFIED PUBLIC SCHOOL DISTRICT DURING THE 1972-73 SCHOOL YEAR

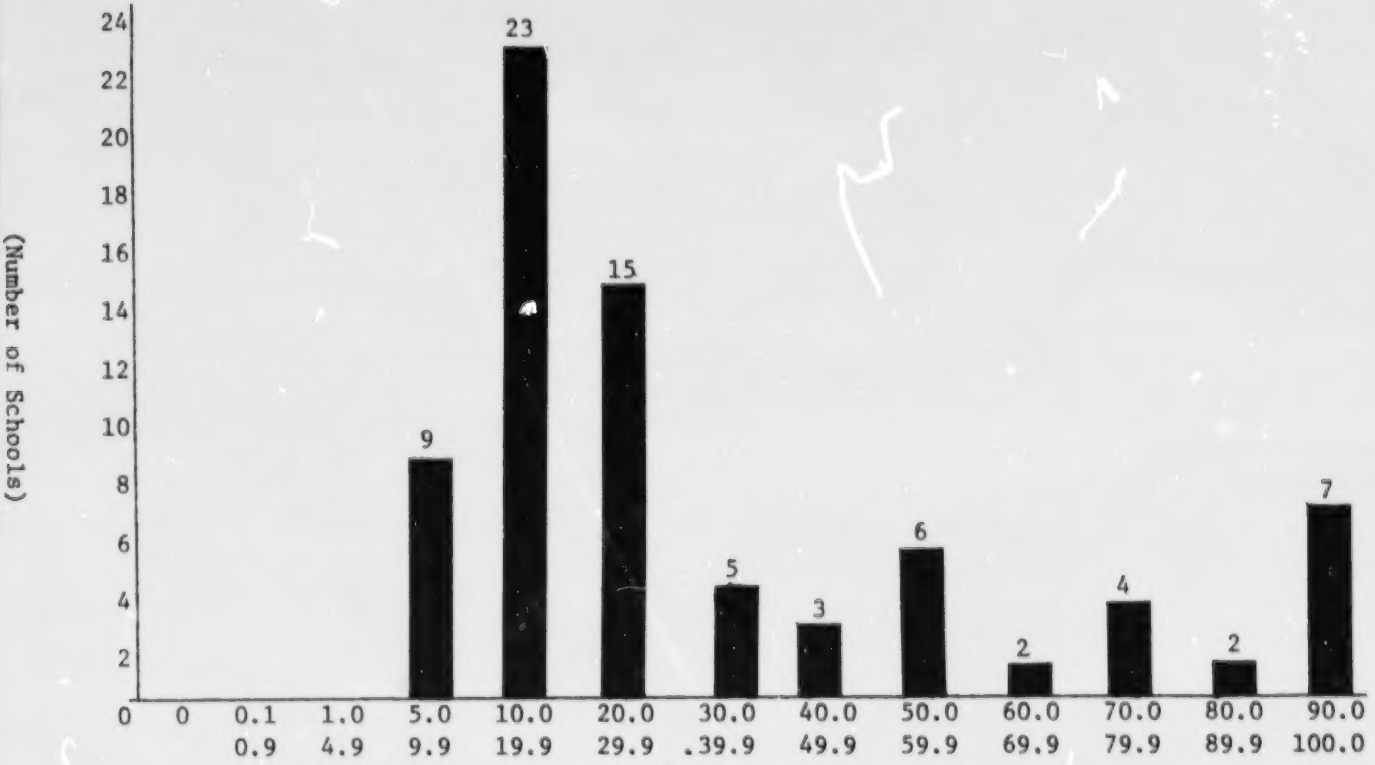
	American Indian	Asian American	Black	Spanish Surname	Total Ethnic Minority	Other	Total
No.	69	851	5,137	11,268	17,325	37,665	54,990
%	0.1	1.6	9.3	20.5	31.5	68.5	100.0

Figure 1 shows the number of schools, i.e., elementary, junior high, and high schools, in the Fresno Unified Public School District with ranges of percentages for all ethnic students. The highest frequency of schools with a given percent (10.0 - 19.9 percent) of total ethnic students was 23. Stated differently, there were 23 schools with 10 to 19.9 percent ethnic minority students. It is interesting to note that there were 21 out of 76 schools which had more than 50 percent ethnic minority students. There were seven schools which had 90 percent or more ethnic minority students.

Table 16 shows the number and percent of district total of ethnic minority students attending the San Francisco Unified Public School District during the 1972-73 school year. Black students represented the largest ethnic minority group with 30.6 percent, followed by Asian American students representing 23.3 percent. There were 68.2 percent total ethnic minority students in San Francisco Unified School District.

Figure 1

NUMBER OF SCHOOLS IN THE FRESNO UNIFIED PUBLIC SCHOOL DISTRICT
WITH RANGES OF PERCENTAGES OF TOTAL ETHNIC MINORITY STUDENTS



N = 76

Table 16

NUMBER AND PERCENT OF ETHNIC MINORITY STUDENTS ATTENDING THE SAN FRANCISCO UNIFIED PUBLIC SCHOOL DISTRICT DURING THE 1972-73 SCHOOL YEAR

	American Indian	Asian American	Black	Spanish Surname	Total Ethnic Minority	Other	Total
No.	249	19,088	25,055	11,511	55,903	26,067	81,970
%	0.3	23.3	30.6	14.0	68.2	31.8	100

Figure 2 shows the number of schools, i.e., elementary, junior high, and high schools, in the San Francisco Unified Public School District with ranges of percentages for all ethnic minority students. Given the fact that there were 68.2 percent total ethnic minority students in that school district, it is not surprising to learn that there were 54 schools with 60 - 69.9 percent ethnic minority students in each school. There were 159 out of 171 schools which had more than 50 percent ethnic minority students. There were 20 schools which had 90 percent or more ethnic minority students. Finally, there were no schools which had less than 20 percent ethnic minority students.

Table 17 shows the number and percent of district total of ethnic minority students attending the San Diego Unified Public School District during the 1972-73 school year. Black students comprised the largest ethnic minority group with 13.2 percent, followed by Spanish Surname students with 11.3 percent. In San Diego there were 26.3 percent total ethnic minority students.

Table 17

NUMBER AND PERCENT OF ETHNIC MINORITY STUDENTS ATTENDING THE SAN DIEGO UNIFIED PUBLIC SCHOOL DISTRICT DURING THE 1972-73 SCHOOL YEAR

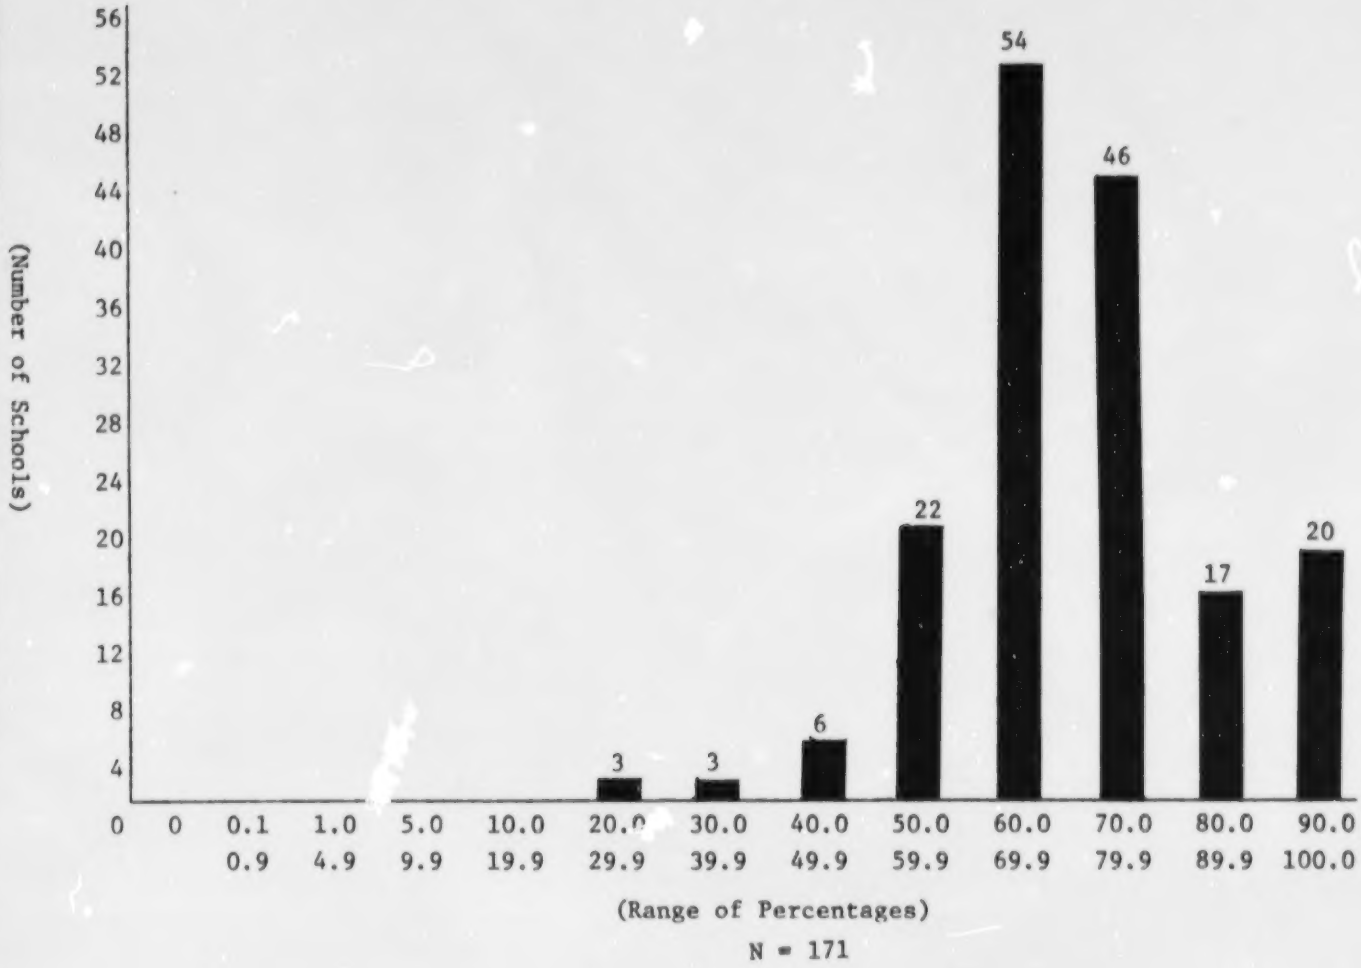
	American Indian	Asian American	Black	Spanish Surname	Total Ethnic Minority	Other	Total
No.	220	1,998	16,492	14,052	32,762	91,725	124,487
%	0.2	1.6	13.2	11.3	26.3	73.7	100

Figure 3 shows the number of schools, i.e., elementary, junior high, and high schools, in the San Diego Unified Public School District with ranges of percentages for all ethnic minority students. There were 39 schools with 10 - 19.9 percent ethnic minority students. There were 30 out of 161 schools with more than 50 percent ethnic minority students. There were 19 schools with 90 percent or more ethnic minority students.

Table 18 presents the number and percent of ethnic minority students attending the Los Angeles Unified Public School District during the 1972-73 school year.

Figure 2

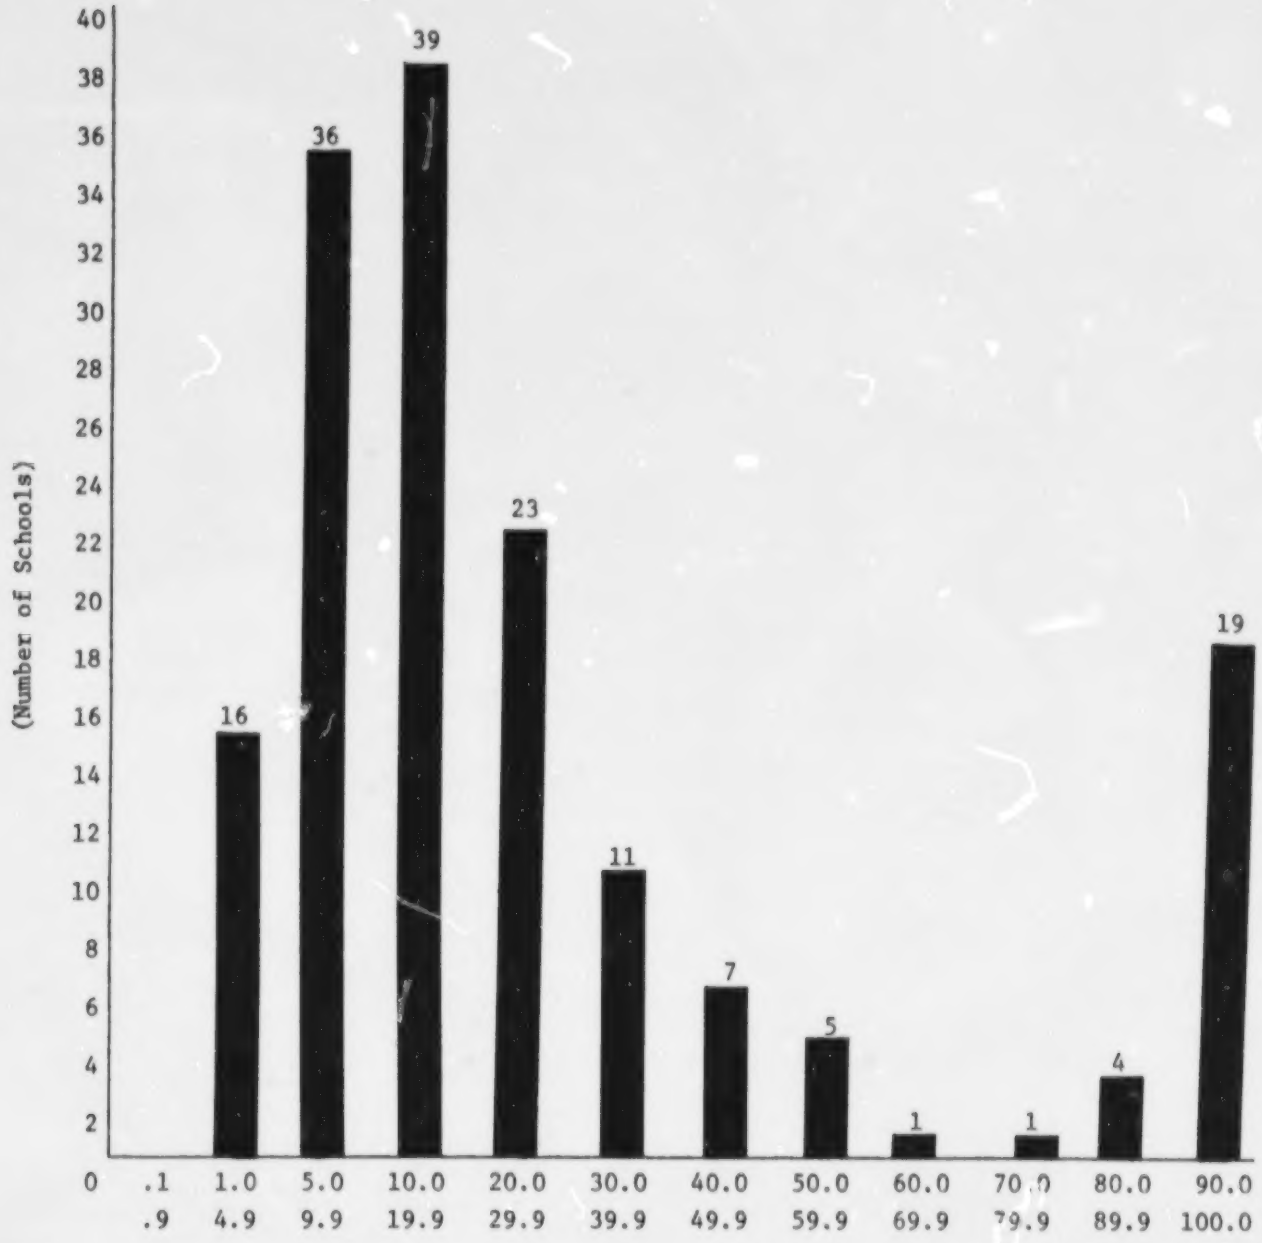
NUMBER OF SCHOOLS IN THE SAN FRANCISCO UNIFIED PUBLIC SCHOOL DISTRICT
WITH RANGES OF PERCENTAGES OF TOTAL ETHNIC MINORITY STUDENTS



N = 171

Figure 3

NUMBER OF SCHOOLS IN THE SAN DIEGO UNIFIED PUBLIC SCHOOL DISTRICT
WITH RANGES OF PERCENTAGES OF TOTAL ETHNIC MINORITY STUDENTS



N = 161

Black and Spanish Surname students represented the largest ethnic minority group with 25.2 and 23.9 percent respectively. There were 52.7 percent total ethnic minority students in that district.

Table 18

NUMBER AND PERCENT OF ETHNIC MINORITY STUDENTS ATTENDING THE LOS ANGELES UNIFIED PUBLIC SCHOOL DISTRICT DURING THE 1972-73 SCHOOL YEAR

	American Indian	Asian American	Black	Spanish Surname	Total Ethnic Minority	Other	Total
Students	1,347	21,220	156,680	158,109	327,356	293,303	620,659
%	0.2	3.4	25.2	23.9	52.7	47.3	100

Figure 4 shows the number of schools, i.e., elementary, junior high, and high schools, in the Los Angeles Unified Public School District with ranges of percentages of total ethnic students. There were 177 schools with 90 percent or more ethnic students. According to Figure 4, it can be seen that a sizeable 29 percent of the schools were ethnically isolated. That is, there were 29 percent schools with 90 - 100 percent students of similar ethnic backgrounds. There were 296 schools with 50 percent or more ethnic students. It is interesting to note that one school had less than 0.1 percent ethnic students.

Given the fact that 29 percent of the schools in Los Angeles had 90 percent or more ethnic minority students, the researchers attempted to identify the predominant ethnicity of the students in those 177 schools. Table 19 presents the ethnic breakdown of the 177 schools in Los Angeles Unified Public School District with 90 percent or more total ethnic minority students.

The ranges of percentages in Table 19 are not to be confused with the ranges of percentages in Figure 4. All 177 schools in Table 19 had at least 90 percent ethnic minority students. Table 19 shows the percentage of the ethnic minority group in each of the 177 schools. For example, there were two out of 177 schools which had between 50.0 and 59.9 percent Asian American students. The difference between the ranges of 50.0 - 59.9 and 90.0 - 100 percent in those two schools consisted of a combination of other ethnic minority students.

Figure 4

NUMBER OF SCHOOLS IN THE LOS ANGELES UNIFIED PUBLIC SCHOOL DISTRICT WITH RANGES OF PERCENTAGES OF TOTAL ETHNIC MINORITY STUDENTS

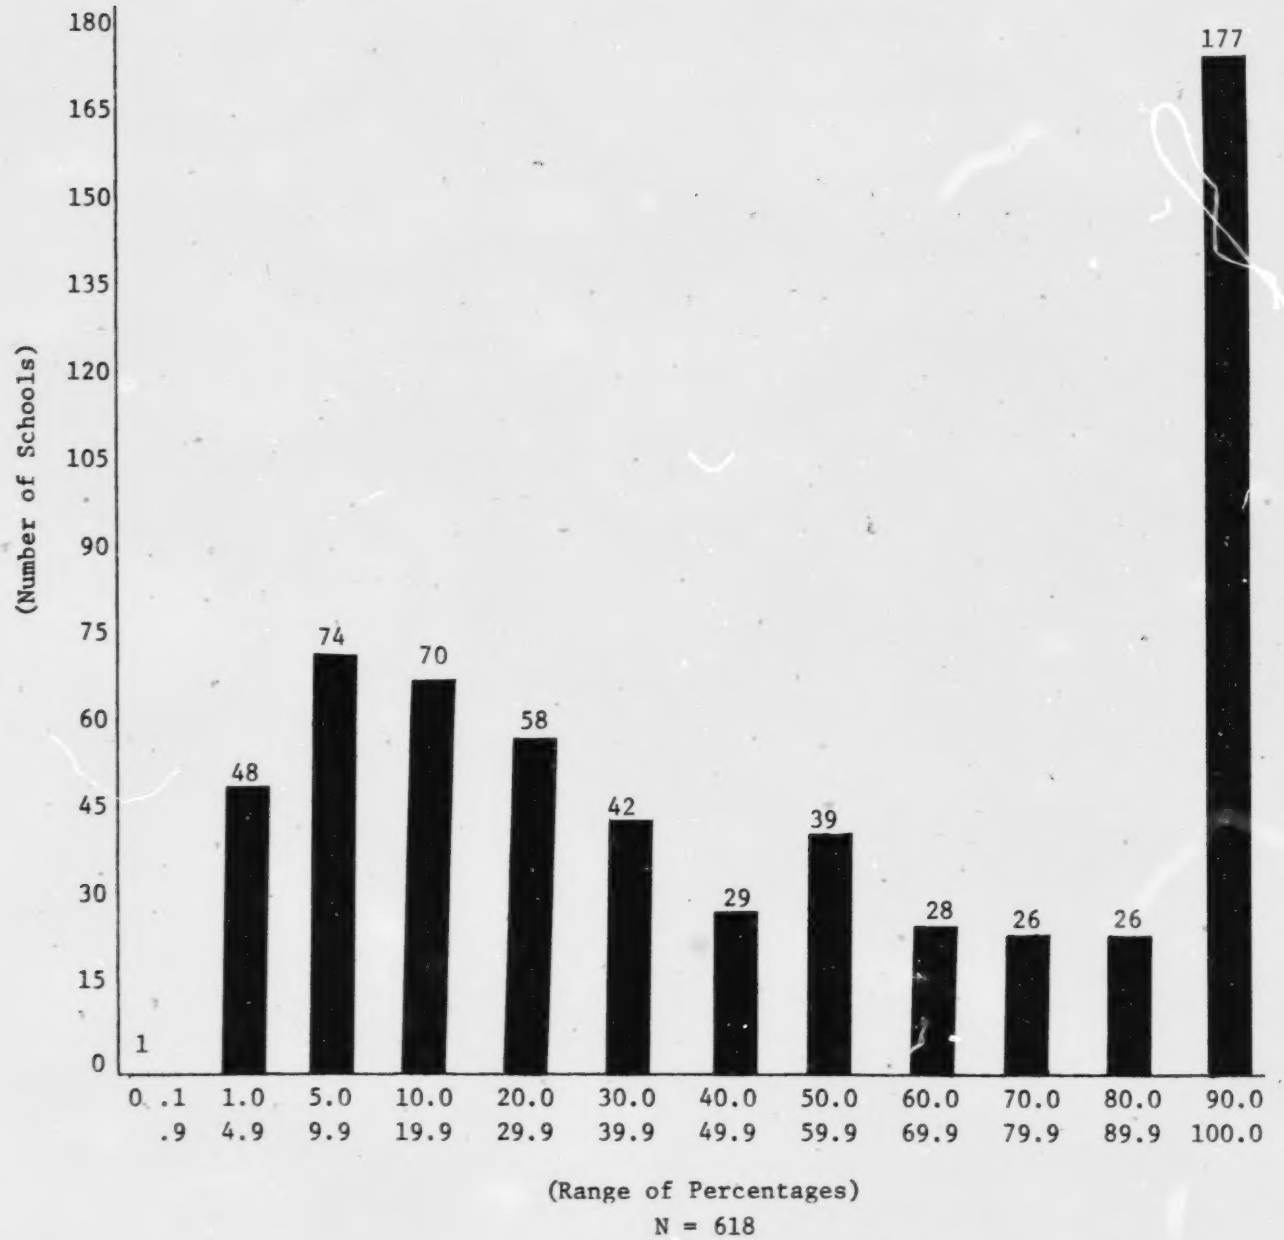


Table 19

ETHNIC BREAKDOWN OF THE 177 SCHOOLS IN LOS ANGELES UNIFIED SCHOOL DISTRICT WITH 90 PERCENT OR MORE ETHNIC MINORITY STUDENTS

Range of Percentages	American Indian	Asian American	Black	Spanish Surname	Total Schools
40 -49.9	0	0	0	2	2
50 -59.9	0	2	3	4	9
60 -69.9	0	0	1	3	4
70 -79.9	0	1	4	2	7
80 -89.9	0	0	19	16	35
90 - 100	0	0	82	38	120
TOTAL SCHOOLS:	0	3	109	65	177

According to Table 19, there were 3 schools where Asian American students were predominant, 65 schools where Spanish Surname students were predominant, and 109 schools where Black students were predominant. The American Indian students were not predominant in any one school.

The ethnic minority group which experienced the greatest degree of student isolation were the Black students. This observation is based on the fact that there were 109 out of 177 schools (62 percent) where Black students were predominant. Furthermore, in 101 of those 109 schools, Black students represented eighty percent or more of the students.

The Spanish Surname students experienced the second greatest degree of student isolation. There were 65 out of 177 schools where Spanish Surname students were predominant. In 54 of those 65 schools, Spanish Surname students represented 80 percent or more students.

SUMMARY OF MAJOR FINDINGS

1. Blacks comprise the largest ethnic minority group in the United States with approximately 11.0 percent of the nation's total population.

2. Spanish Surname persons comprise the largest ethnic minority group in California with approximately 15.5 percent of the state's total population.

3. The largest student ethnic minority in the California public schools is the Spanish Surname with approximately 17.2 percent of the state's total population.

4. Alpine County had the highest percent of county total (37.1%) of American Indian students which represented about 39 students during 1973-74.

5. Los Angeles County had the largest number, 3,746, of American Indian students during 1973-74.

6. Reservation Elementary School District in Sonoma County had the highest percent of district total (100%) of American Indian students, which represented about 18 students during 1973-74.

7. San Francisco County had the highest percent of county total (25.3%) of Asian American students, which represented approximately 19,734 students during 1973-74.

8. Los Angeles County had the largest number (45,696) of Asian American students during 1973-74.

9. Pope Valley Union Elementary School District in Napa County had the highest percent of district total (89.6%) of Asian American students, which represented approximately 25 students during 1973-74.

10. Approximately 49 percent of the Asian American students were concentreated in Los Angeles and San Francisco Counties during 1973-74.

11. Los Angeles County had the highest percent of county total (53.0%) and number (230,084) of Black students during 1973-74.

12. Compton Unified School District in Los Angeles County had the highest percent of district total (88.2%) of Black students, which represented approximately 30,449 students during 1973-74.

13. Three-fourths or 74.1 percent of the Black students in California are located in Los Angeles, Alameda, San Francisco, and San Diego Counties.

14. Los Angeles County had the highest percent of the state total (40.8%) and number (312,055) of Spanish Surname students during 1973-74.

15. Parlier Unified School District in Fresno County had the highest percent of district total (92.6%) of Spanish Surname students, which represented approximately 1,581 students during 1973-74.

16. Approximately 53 percent of the Spanish Surname students in California were in Los Angeles, Santa Clara, and Orange Counties during 1973-74.

17. There were 177 schools in the Los Angeles Unified School District with 90 percent or more ethnic minority students during 1972-73.

18. Of the 177 schools in the Los Angeles Unified School District with 90 percent or more ethnic minority students, 109 schools had predominantly Black students during 1972-73.

19. Of the 177 schools in the Los Angeles Unified School District with 90 percent or more ethnic minority students, 65 schools had predominantly Spanish Surname students during 1972-73.

SUMMARY AND CONCLUSIONS

This study has identified the concentrations of American Indian, Asian American, Black, and Spanish Surname students attending the public schools of California during the 1973-74 school year. Data for this study are not available in any one source for years after 1973-74. However, this study assumes that there is no significant percentage change in any one major student ethnic minority group per district and per county from 1973-74, the year the data were collected, to 1976, the year this study was made.

Apart from the major findings presented in the previous section of this report, this study has shown that there are three basic methods of identifying concentrations of ethnic minority students: actual numbers, percentage of county total and percentage of state total.

It is important to note that one method for identifying concentrations of ethnic minority students for a given locality will not necessarily produce the same results as another method. Therefore, it becomes essential that the researcher choose the one method that best satisfies the objective of his study.

A summary of the major findings of this study are presented in the previous section of this report. No attempt will be made to reiterate those findings in this section of the report.

In conclusion, this study has taken existing data and analyzed it to satisfy certain objectives. Sizeable amounts of energies, expenses, and time have been invested to gather large quantities of significant data whose full potential for thorough and complete analysis is usually never realized. By capitalizing on the efforts of others, this study was able to analyze existing data and consequently, present its findings relative to student ethnic minority concentrations in the California public schools for 1973-74.

RECOMMENDATIONS

The following recommendations are based on and are a result of the finding of this study:

1. Student ethnic data should be collected every year by county, school district, and school for purposes of updating this information.
2. Analysis of the data contained in this report is only a partial analysis of what the data contain. Other research efforts should analyze the data from different perspectives.
3. Other research studies using other variables should be undertaken to identify significant relationships and/or significant similarities and differences between the various ethnic minority groups.
